Hazards of Tailgating for Light Commercial Vehicles	1 / 1	19/05/2017					[Resume]
HSE Orientation	1 / 38	16/03/2018					[Resume]

Automate data synchronization so you can focus on what matters most.

— Application Programming Interface (API) —

An application programming interface (API) is a means for allowing two or more systems to communicate. Using an API, your company can seamlessly transfer data between your systems and ours to automatically:

- Create and remove users in our LMS based on your payroll system updates
- Assign courses to new user accounts
- Transfer course completion data, including scores, attempts, average times, and certificates
- Add company locations and roles

Single Sign-On

Single sign-on utilizes the login authentication process of one of your systems to gain instant access to ours. Single sign-on can be used with a variety of systems including your:

Company
Intranet

Payroll
System

Customer Relationship
Management System

Social Networking
Tools

Project Management
Software

Security

To securely transfer data, our system requires an encrypted authentication token comprised of the following:

BIStrainer Key: Validates that access permission has been granted to our system

Company Identifier: Confirms which company the user belongs to within our system

Employee I.D.: Uniquely identifies each employee

Course I.D.: Determines which courses should be added to a user's account
